# OXFORD PAIN MANAGEMENT LIBRARY

## Opioids in Non-Cancer Pain

CATHY STANNARD, *Frenchay Hospital, Bristol, UK*,  
MICHEAL H. COUPE, *Royal United Hospital, Bath, UK*,  
and ANTHONY PICKERING, *Bristol Royal Infirmary,  
Bristol, UK*

This pocketbook brings clinicians up-to-date on the current use of opioid drugs in patients with non-cancer pain, and highlights the potential benefits of therapy as well as the problems that can occur.

2008 136 pp.  
978-0-19-923123-2 paper ~~\$24.95~~/\$21.20

## Migraine and other Primary Headaches

Edited by ANNE MACGREGOR, *Honorary Director of Clinical Research, The City of London Migraine Clinic, London, UK*, and RIGMOR JENSEN, *Research Professor, Danish Headache Center, Department of Neurology, Glostrup Hospital, Denmark*

The scope of this pocketbook is intended to give a comprehensive but concise knowledge of established and salient new data on the diagnosis, pathophysiology, and treatment of headaches and migraines. It will appeal to both clinical and academic audiences, but will also appeal to general practitioners and related health care professionals.

2008 144 pp.; Various line drawings & b/w photos  
978-0-19-954514-8 paper ~~\$24.95~~/\$21.20

## Chronic Pain

Edited by ANDREW DICKMAN, *Senior Clinical Pharmacist, Marie Curie Palliative Care Institute, Marie Curie Hospice Liverpool, UK*, and KAREN H. SIMPSON, *Consultant in Pain Medicine and Senior Clinical Lecturer, Leeds Teaching Hospitals Trust, Seacroft Hospital, Leeds, UK*

This book succinctly describes the options available for the management of chronic pain, including pharmacological therapies, anesthetic techniques and complementary approaches.

2008 152 pp.  
978-0-19-923028-0 paper ~~\$24.95~~/\$21.20

## Cancer-related Bone Pain

Edited by ANDREW DAVIES, *Royal Marsden Hospital NHS Foundation Trust, Sutton, Surrey, UK*

2008 144 pp.  
978-0-19-921573-7 paper ~~\$24.95~~/\$21.20

## Opioids in Cancer Pain

KAREN FORBES, *University of Bristol, UK*

"...a pleasure to read as well as being brief, authoritative and highly informative. This is a small, genuinely pocket-sized book, but it packs a big punch and reflects accurately the major advances that have been made during the last 20 - 30 years in the understanding of the pathophysiology and management of pain due to cancer...[contains] a chapter on opioid receptors that is a minimalist *tour de force*."  
—*British Journal of Anaesthesia*

2008 152 pp.; 5 figures and 15 tables  
978-0-19-921880-6 paper ~~\$24.95~~/\$21.20

## Pain in Older People

Edited by PETER CROME, *Keele University, UK*, and CHRIS J. MAIN, *Keele University, UK*

A concise companion for healthcare professionals who manage older patients suffering with pain. Concise chapters summarize up-to-date research literature in a practical style that will have direct relevance to busy clinicians. Introductory chapters include the epidemiology of pain in older people as well as the proper assessment of older patients with pain conditions. Later chapters focus on specific painful conditions common in the elderly, including arthritis and rheumatism, osteoporosis, abdominal pain, and cancer.

2008 200 pp.; 21 b/w illus.  
978-0-19-921261-3 paper ~~\$24.95~~/\$21.20

## Neuropathic Pain

Edited by MICHAEL BENNETT, *St. Gemma's Hospice and University of Leeds, UK*

"Useful summary...It is recommended as a good short introduction to neuropathic pain."—*Advances in Clinical Neuroscience and Rehabilitation*

2006 192 pp.; 20 photographs & illus.  
978-0-19-921569-0 paper ~~\$24.95~~/\$21.20

**The Diagnosis and Treatment of Breakthrough Pain**

PERRY FINE

This highly practical guide covers current approaches and new developments in the assessment and management of Breakthrough Pain, including both cancer-related pain and non-cancer chronic pain. It addresses the roles of opioid and non-opioid pharmacotherapy and presents non-pharmacologic interventions, as well.

## Clinical Pain Management

4 volume set  
Second Edition

ANDREW RICE, RICHARD HOWARD, DOUG JUSTINS, and CHRISTINE MIASKOWSKI

This comprehensive clinical reference work, comprising four volumes, presents readers with all they need to know to provide a successful pain management service. Three clinical volumes deal with all aspects of pain: Acute, Chronic and Cancer; from the basic mechanisms underlying the development of pain, to the various treatments that can be applied in different clinical situations. The fourth volume, *Practice and Procedures*, complements these by providing helpful advice on practical aspects of clinical management and research.

- **All-encompassing** - covers all areas of clinical pain management, with numerous new and revised chapters
- **Authoritative** - written and edited by the world's leading experts making this a dependable and global reference
- **International** - based on the curriculum of the International Association for the Study of Pain, ensuring worldwide applicability
- **Innovative** - includes features such as evidence scoring to ensure statements relating to clinical interventions are supported by the literature, while reference annotation guides readers quickly to key primary papers and major reviews
- **Easily navigable** - divided into 4 volumes ensuring the wealth of information is readily accessible for the busy clinician. New for this Second Edition, there is a companion website containing chapters and illustrations from the 4-volume set

## Acute

Second Edition

PAMELA MACINTYRE, DAVID ROWBOTHAM, and  
SUELLEN WALKER

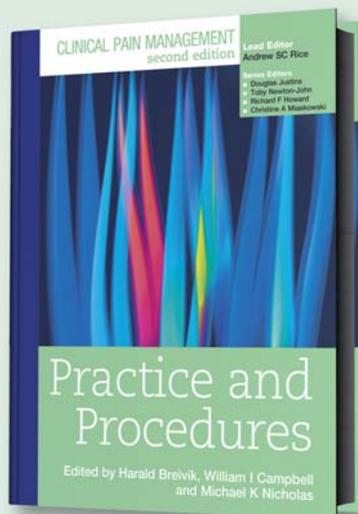

*Acute Pain* brings coverage of this diverse area together in a single comprehensive clinical reference, from the basic mechanisms underlying the development of acute pain, to the various treatments that can be applied to control it in different clinical settings. Much expanded in this second edition, the volume reflects the huge advances that continue to be made in acute pain management.

**Part 1** examines the basic aspects of acute pain and its management, including applied physiology and development neurobiology, the drugs commonly used in therapy, assessment, measurement and history-taking, postoperative pain management and its relationship to outcome, and preventive analgesia.

**Part 2** reviews the techniques used for the management of acute pain. Methods of drug delivery and non-pharmacological treatments including psychological therapies in adults and children and transcutaneous electrical nerve stimulation are considered here.

**Part 3** looks at the many clinical situations in which acute pain can arise, and the methods of treatment that may be suitable in each circumstance, whether the patient is young or old, has pain due to surgery, trauma, medical illness or childbirth, or is undergoing rehabilitation. Issues specific to the management of acute pain in the developing world are also covered here.

## Prac

*Second Edition*

WILLIAM CAMPBELL, MICHAEL NICHOLAS,  
HARALD BREIVIK, and TOBY NEWTON-JOHN

Largely reorganized and much expanded in this second edition, *Practice and Procedures* brings together in a single volume general methods of pain assessment and presents the wide range of therapies that can be provided by a range of health care disciplines. Authored by a multidisciplinary team of experts, chapters can stand alone for readers looking for a general overview of the methods of techniques for pain management available to them or work to complement chapters in the preceding three volumes, providing practical procedures and applications in the management of acute, chronic and cancer pain.

**Part 1** covers the principles of measurement and diagnosis, including history taking and examination, the selection of pain measures, diagnostic tests and novel imaging techniques.

**Part 2** discusses the full range of therapeutic protocols available, from pharmacological therapies, through psychological techniques, physical therapy and international procedures, to techniques specific to pain assessment and management in pediatric patients.

**Part 3** provides information on planning, conducting, analyzing and publishing clinical trials, with invaluable guidance on the techniques of systematic review and meta-analysis in pain research.

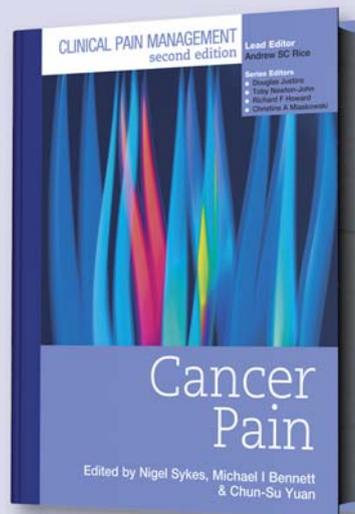

**Part 4** considers the role of multidisciplinary pain management teams, their organization, their place within different health care systems, and how best to manage change when implementing such a service.

**Part 5** concludes the volume, investigating the use of guidelines, standards and quality improvement initiatives in the management of post-operative pain, and discussing the expert medicolegal report.

(A Hodder Arnold Publication)

2008 880 pp.; 158 b/w line drawings, 73 b/w

## Canc

*Second Edition*

NIGEL SYKES, MICHAEL BENNETT, and  
CHUN-SU YUAN

Now divided into four parts, the second edition of *Cancer Pain* delivers broad coverage of the issues that arise in the management of malignancy-related pain, from basic science, through end of life care and associated ethical issues, to therapies, both medical and complementary.

**Part 1** reviews basis considerations in cancer pain management, including epidemiology, pharmacology, history-taking and patient evaluation and teamworking.

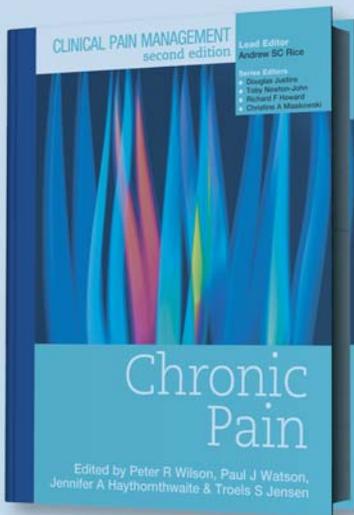

**Part 2** brings together the drug therapies for cancer pain, their underlying basis, and potential side-effects.

**Part 3** covers the non-drug therapies, including nerve blocks, stimulation-induced analgesia, radiotherapy, complementary therapies and psychological interventions. The control of symptoms other than pain, so critical to cancer patients, is also considered here.

**Part 4** describes special situations. Cancer pain management in children and older patients, and in the community setting, and pain in the dying patient and the cancer survivor are all covered here.

(A Hodder Arnold Publication)

2008 624 pp.; 40 b/w line drawings, 15 b/w half-tones  
978-0-34-094007-5 cloth ~~\$195.00~~/\$146.25

## Chrc

*Second Edition*

PETER WILSON, TROELS JENSEN, PAUL WATSON, and JENNIFER A HAYTHORNTHWAITE

The second edition of *Chronic Pain* now covers a vast scientific and clinical arena, with the scientific background and therapeutic options much expanded. In common with the other titles comprising *Clinical Pain Management*, the volume gathers together the available evidence-based information in a reader-friendly format without unnecessary detail, and is divided into three parts. The broad coverage under Part One encompasses basic science, including applied psychology, genetics and epidemiology, through societal aspects of chronic pain and

regional pain in the head, face, neck, back, joints, chest, abdomen and pelvis, and issues related to pain in children, the elderly and in
